

NovaCart — Payment Policy

Payment Verification

- Payment status must be verified from the payment system before confirming a transaction as successful or failed.
- Possible payment states include Pending, Successful, Failed, Refunded, and Reversed.

Failed Payments

- If a payment fails, customers may retry using an available payment method.
- Customers should never share card numbers, CVV, PINs, OTPs, or passwords with support.

Payment Deducted but Order Missing

- When money is deducted but an order is not successfully created, support should check both payment and order records.
- If reconciliation is required, create a support ticket with the relevant payment reference and customer context.

Refunds

- Refund timing depends on when the refund is initiated and the payment provider's processing time.
- Support must use verified payment information when communicating refund status.
